PASSION FOR DEVELOPMENT!

I've used JCreator Pro as a training tool and to write a number of applications. It has always met my needs completely and I've found it the easiest tool to use from several that I've tried. In fact, I like JCreator Pro so much that it appears in three of the books that I've written about Web services and in several articles for magazines. One of the features I like best is how JCreator Pro lets you work with multiple libraries, including the third party libraries needed to create robust Web services applications without a lot of hassle. I recommend this tool for anyone who is serious about creating Java applications with a minimum of fuss.

When I wrote "Java 2 For Dummies, 2nd Edition," I demanded a lot from a Java development environment. I needed an environment that's powerful, efficient, versatile, easy to use, and inexpensive. I found this combination of qualities in only one product: JCreator from Xinox Software. JCreator is a wonderful product. I hope you enjoy using it.

JCreator is an outstanding Java development tool. In my view it is particularly suitable for beginners because of its easy-to-learn, intuitive, but powerful user interface.

Beginners can use JCreator in a way that suits their level of expertise so they only need to get into the more advanced features when they are ready.
